

The Internet of Things (IoT)

The Internet of Things is all the rage in technology these days and TradeTec has developed cool new toys for both MaintenanceMan and TallyWorks.

These toys are small, PLC like devices that connect to your TallyWorks or MaintenanceMan to improve automation and or inventory visibility by providing focus driven technology leveraging IoT

A TallyMaster Black Box IoT is placed where traditionally you needed to have a person scan a package of lumber or monitor a sensor. Now the TallyMaster Black Box IoT does the labor.

Inexpensive, focus driven tools that communicate real time with TradeTec's software, help to improve accuracy and decrease production costs.

TallyMaster IoT & MaintenanceMan IoT are capable of doing almost anything, from scanning boards, packages, monitoring wood flow, barcodes to sensing fluids, vibration or engine hours.

You name it , TradeTec will configure it.

Let's Talk about it!!!
